Summary

- Software Development Engineer with 6+ years of full-stack development experience, specializing in building scalable web applications with Node.js, React.js, Python, Java, Go, and AWS.
- Hands-on experience in creating AI-driven solutions, implementing low-latency data streams, building features for large-scale systems and developing responsive and modular front-end applications.

Technical Skills

Python, Typescript, Node.js, React.js, Javascript, Java, Golang, C++, ECS, S3, SQS, Lambda, Bedrock, SageMaker, CDK, LlamaIndex, RAG, MySQL, MongoDB, Redis, DynamoDB, K6, RabbitMQ, Kafka, Spring, Hibernate, Express.js, Event-Driven Architectures, Microservices, Flask, Redux, Redux-Saga, TailwindCSS, Git, GitHub Actions, Docker, CI/CD

Work Experience

Software Development Engineer II at Safe Security, Bengaluru [Oct'21 - Jun'25]

- As part of AI and Analytics team, I worked on snapshot storage system to enable historical trend analysis and comparisons, datalake to power peer benchmarks, and multiple AI-driven solutions.
- Developed SafeX, a GenAI assistant based on RAG (Retrieval-Augmented Generation) architecture using Bedrock and OpenAI, enabling users to interact with the product through natural language as an alternative to user interface.
- Developed AI Agents with Python, LlamaIndex and Bedrock, for Dashboard Summary, Contract Analysis, Questionnaire, and Report Parsing to automate third-party risk management using LLMs.
- Implemented low-latency data streams to synchronize data from a single-table architecture in DynamoDB to MySQL for on-demand analytical queries, handling 200+ events per second using Node.js, Lambda and change data capture streams.
- Built and maintain a Go-based service to store industry benchmarks of threat event frequencies and breach incidents, supporting over 60 requests per second. Implemented CI/CD via GitHub Actions with AWS CDK-managed infrastructure as code.
- Secured runner-up position in company-wide hackathon by migrating AWS CDK-managed infrastructure to Terraform, achieving a 60% reduction in deployment time. Later this approach was adopted using OpenTofu to migrate existing production services.

Software Engineer at Snapwiz Inc., Bengaluru [Jan'18 - Sep'21]

- Contributed to core product development across frontend and backend systems, including feature implementation, third-party integrations, automation tools, and performance optimization. Additionally, supported application migration, data synchronization, and mobile app maintenance.
- Implemented data pipeline from MongoDB to Redshift to support analytics on 5TB+ of data, enabling critical insights into academic performance, standards mastery, and academic risk through a unified dashboard.
- Built text-to-speech accessibility feature leveraging AWS Polly, SNS, and S3, supporting speech generation for dataset exceeding 1 million entries.
- Developed migration tools to onboard users from Canvas, Clever, Google Classroom to Edulastic, syncing activities to original platforms, driving significant user growth.
- Implemented bubble-sheet scanner using OpenCV, Python, and C++ to automate ORM sheet processing to automate scorecard generation. Followed by migrating the feature to the frontend, enabling client-side scanning and eliminating file uploads.
- Completed 3 months of training on Spring MVC, Hibernate, Mongodb, Redis and Backbone.js. Worked as Full-Stack Java Developer, monitoring performance and optimization for web application for a year and maintained Snapscore bubble-sheet scanner mobile application.

Awards and Achievements

- Received the **SafeStar Award** in recognition of delivering reliable features and development velocity.
- Earned **Appreciation Award** twice for delivering high-quality, stable features.
- Secured **First rank** in college in the online round of ACM-ICPC Asia Amritapuri site 2015.
- Secured **Eleventh rank** in the second round of TCS CodeVita 2016 Mumbai regional.
- Won **Second Prize** in an IoT competition conducted by Innovians Tech. in association with IIT, Varanasi.

Education

Oriental Institute of Science and Technology, Bhopal 2013 – 2017
B.E., Information Technology 7.3/10
